

RIV COMFORT HVAC SCRIPT

Field reference card — Big Five at a glance

STEP 1 PRODUCT RAPPORT Walk-around. Build trust through diligence.	STEP 2 EXPECTATIONS Set agenda. Plant seed. Earn yes/no.	STEP 3 PAIN Surface the cost of staying as-is.
WALK TO AC TOGETHER • Take photos • Shoulder-to-shoulder • 4 things in common • 80/20 listen rule	3-PART SET • Walk through options • Financing seed • Yes or no at end • "Is that fair?"	4 PAIN POINTS + FORCED CHOICE • Bills • Comfort • Reliability • Air quality • Then: replace or leave?
STEP 4 VALUE 9 benefits. 3 tiers. Lean + why.	STEP 5 COMMITMENT Qualify. Last 4 of social. Close.	DIAGNOSTIC TRIFECTA What pillar wobbled if it didn't close?
HIGH FIRST → ANCHOR • Premium \$25K • Comfort+Eff \$20K • Comfort \$15K • "Which do you lean to?" • "Why?"	2-STEP TRANSITION • Confirm tier • Last 4 of social • Path A or Path B • A.A.R.C. on pushback • Stay → Referral	TRUST / VALUE / URGENCY • Guarded? → TRUST • Price? → VALUE • Wait? → URGENCY • Smoke screen? → TRUST

LOCKED PHRASES — KNOW THESE COLD

WALK-AROUND TRANSITION <i>"I have a pretty good idea of what we need to do. I have a few options. Do you have anywhere we could sit?"</i>	FINANCING SEED <i>"Quick thing before we dig in — most folks these days aren't writing a check..."</i>
YES/NO COMMIT <i>"All I'm going to ask at the end is whether it's a yes or a no. Is that fair?"</i>	FORCED CHOICE (PAIN) <i>"Your HVAC is going to break eventually. Are you going to replace it or leave it as-is?"</i>
LEAN + WHY <i>"Which one do you lean to the most? ... Why is that?"</i>	UNIVERSAL SOCIAL ASK <i>"I just need the last four of your social — like a wifi password, no big deal."</i>

TWO RULES — DON'T CONFUSE THEM

Different time scales. Different rules. Both apply.

IN THE ROOM Time scale: minutes	IN THE PIPELINE Time scale: months / years
Don't quit on the FIRST no. Run NEPQ — Clarify, Discuss, Diffuse. After ~3 cycles or shutdown markers (crossed arms, energy shift): STOP . Set the concrete follow-up. Leave clean.	Lead stays in pipeline indefinitely. Active follow-up within 48 hours. CRM drip handles cold leads. Two exits only: explicit STOP or death . A no in the room is not a no forever.

HOW TO READ THIS DOCUMENT

The rest of this document is the full sit walkthrough. It uses three visual conventions:

"This is what you say. Italics on grey-green background."

→ **This is what you do. Tan box with arrow.**

This is a key principle. Worth re-reading.

Read it once end-to-end before your first sit. Then study it section by section. Then run it.

THE OPENING

Before the Big Five — first 60 seconds at the door

At the door

→ **Show up on time. Phone in pocket on silent. Smile genuinely when door opens. Use their name in the first sentence.**

"Hey [Mr./Mrs. X], I'm [your name] from Riv Comfort — we had an appointment for 6:30, right? Thanks for having me out."

→ **Wait for them to invite you in. Don't push past them. Take your shoes off if you see other shoes by the door.**

Walking in

→ **Look for cues — trophies, family photos, hobby gear, a dog, the car in the driveway. Reference what you see naturally.**

"Oh, you fish? My grandpa was big into that — what species are you going for around here?"

Personal rapport happens DURING the walk-around — not at the door. Don't try to do it all here. Get them moving.

STEP 1 — PRODUCT RAPPORT

The walk-around. Build trust through visible diligence.

Personal rapport makes you likable. Product Rapport makes you trusted.

The invitation

→ Don't head to the table first. Don't go alone. Invite the homeowner to walk to the AC unit with you.

"Hey, before we sit down, can we walk over to the AC unit real quick? I want to take a look and grab a few photos."

→ If they say "the system's just down in the basement, you can go look" — adapt. Indoor unit, attic, thermostat. The principle is walking together, not the location.

At the equipment

→ Stand **SHOULDER-TO-SHOULDER** with the homeowner. Two people looking at the same problem together.

→ Take real photos. Condenser. Indoor unit. Thermostat. Ductwork. Photos serve the proposal **AND** signal diligence.

→ Comment on what you see. Build authority through demonstrated competence.

"Yeah this unit looks like it's about 12 years old — I can tell from the model number on the side here."

"That refrigerant line is a little corroded — pretty common for this age. Has anyone been out to service this in the last few years?"

Casual questions during the walk-around

→ Ask casual questions while you take photos. Personal rapport happens **HERE** — naturally, while you work.

→ **80/20 rule** — homeowner talks **80%** of the time. Ask, then shut up.

"How long have you lived here?"

"What brought you out to this neighborhood?"

"What do you do for work?"

"What do you guys do for fun?"

"Kids? Pets?"

Find four things in common

→ Aim for **FOUR** genuine commonalities during the walk-around. One or two feels coincidental. Four feels like "this person actually gets me."

→ Look for: hobbies, sports, family, work, shared background, similar life stage. Reference cues from the home — trophies, cars, hobby gear.

The transition out — walk-around to table

→ Equipment looked at. Photos taken. Four things in common found. Time to head to the table.

"Hey [Mr./Mrs. X], I have a pretty good idea of what we need to do. I have a few options. Do you have anywhere we could sit?"

→ **Three things this transition does: signals confidence ("pretty good idea"), pre-announces options ("a few"), asks for the table specifically. Standing conversations stay shallow. Sitting conversations get serious.**

The 6 rapport killers — avoid all of them

- **Talking too much** — fill the silence with their words, not yours
- **Checking your phone** — phone goes in pocket on silent
- **Making it about you** — "in my experience..." turns the conversation the wrong way
- **Jumping to the pitch** — sudden pivot tells them rapport was performance
- **Faking interest** — they can tell. Worse than no rapport.
- **Trying too hard** — over-complimenting signals insecurity

STEP 2 — EXPECTATIONS

Set the agenda. Plant the financing seed. Earn the yes/no commit.

Expectations is the permission slip for everything that comes next. Skip it and you fight for permission the whole sit.

Part 1 — Walk through the options

→ First thing at the table. Reference the walk-around. Pre-announce options.

"So based on what I saw out there, I have a few options I want to walk you through. Each one solves the problem a little differently — different price points, different features. By the end you'll have a clear picture of what makes sense for your situation."

→ Three things this does: pulls forward trust from Step 1, pre-announces multiple options (not take-it-or-leave-it), positions you as advisor not closer.

Part 2 — The financing seed

The most critical line in the entire expectation set. Plant it BEFORE prices come up. Plant it casually. Plant it once.

"Quick thing before we dig in — most folks these days aren't writing a check for something like this. So part of what we'll do is figure out the budget piece together — what monthly payment actually makes sense for your situation."

→ Why this matters: if you skip the seed and reveal a \$20K tier price cold, the homeowner does lump-sum math and gets sticker shock. With the seed planted, they hear \$20K and immediately think "okay, what's that monthly?"

→ If they say "actually we're paying cash" — acknowledge calmly, drop the financing thread, continue.

"Got it — totally works. Either way, we'll figure out what makes sense for you."

Part 3 — Yes or no at the end

→ Pre-empt the "think about it" smoke screen. Earn permission to close.

"And at the end of all this, all I'm going to ask is whether it's a yes or a no. I'm not asking you to think about it or get back to me later — just give me a clear answer one way or the other. Is that fair?"

→ Wait for verbal "yeah, that's fair" before continuing. Don't move on with passive silence.

→ If they push back ("I don't want to commit to anything yet") — that's a Trifecta diagnostic. Trust isn't fully built. Don't fight it.

"Yeah, totally fair, no pressure. Let's keep walking through and you'll have all the info you need either way."

Why "is that fair?" works

- Hard to disagree with — "no, that's not fair" requires active disagreement
- Earns ACTIVE consent (verbal yes), not passive silence
- Positions you as reasonable — you care about being fair

→ Use it 3-4 times max per sit. Beyond that, it loses weight.

STEP 3 — PAIN

Surface the cost of staying as-is. The engine of every decision.

Without pain, there is no decision. Pain is what makes the homeowner choose action over inaction.

The 4 pain points

→ Walk through each pain point. Use the homeowner's actual situation when possible — reference what you saw on the walk-around.

1. Bills

"So your last few utility bills — what have those been running? ... Yeah, that's about what I'd expect for a system this age. Most folks I work with see their bills drop 20-30% with new equipment."

2. Comfort

"Have you noticed any rooms that are warmer than others? Upstairs running hot in the summer, basement running cold in the winter? ... That's almost always a sign the system can't keep up evenly anymore."

3. Reliability

"How many times have you had someone out to service this system in the last few years? ... Yeah, that's where it starts compounding — the repairs add up, the breakdowns get more frequent, and you never quite feel safe with it."

4. Air Quality

"Anyone in the household have allergies, asthma, anything respiratory? ... Older systems pull a lot of dust through ductwork that's been there for decades. New equipment paired with proper filtration changes that completely."

The car analogy

→ Use this to make the pain concrete. Almost every homeowner has had a car they kept too long.

"Think about it like a car — at some point you've owned a car where you kept dumping money into repairs, and you had this nagging feeling that you were just throwing money at something that was going to die anyway. HVAC works the same way. There's a point where the smart move is replacement, not another repair. The question is whether you're at that point now or in two years."

The forced choice

This is the most important question in Step 3. It forces the homeowner to commit to action — even if not today.

"[Mr./Mrs. Customer], your HVAC is going to break eventually. Be honest with me — when that does happen, are you going to replace it, or leave it as is?"

→ Wait. Let them answer. The vast majority say "replace it." Some say "I don't know, depends on cost." A few say "we'd just deal with it."

→ If they say replace — you've earned the right to talk solutions. Move to Step 4.

→ If they say "depends on cost" — that's a financing seed cue. "Yeah, that's exactly why we figure out the budget piece together first — so cost isn't the deciding factor."

→ If they say "we'd just deal with it" — that's a Trifecta diagnostic. Pain hasn't landed. Go back through the bills and the reliability piece more slowly.

STEP 4 — VALUE

9 benefits. 3 tiers. Lean + why.

Lead with the high tier. Anchor high. Let them step down to where they're comfortable.

The 9 benefits — what new HVAC actually delivers

→ Walk through these as you build value. Reference the pain points from Step 3 wherever possible.

- Better airflow throughout the house
- Faster heating and cooling (gets to setpoint quicker)
- More efficient — uses less energy for the same comfort
- Less wasted energy — no more conditioning leaky ductwork
- Cleaner air — better filtration
- Humidity control — actually pulls moisture out in summer
- Longer warranties — 10 years parts is standard, 12 on premium
- Properly sized ductwork — most systems are mis-sized for the home
- Smart thermostat — control from your phone, see usage patterns

The three tiers — present HIGH FIRST

→ Anchor with Premium. Let the price register. Then walk back down through Comfort+Efficiency and Comfort. Reps who lead with the cheapest tier never sell premium.

Tier 1: Premium — \$25,000

"This is the top tier — variable-speed inverter compressor, the highest SEER rating we install, premium filtration, the longest warranty, smart thermostat included. This is what someone gets if they want the absolute best — quietest, most efficient, longest-lasting."

Tier 2: Comfort+Efficiency — \$20,000

"This is the middle tier — two-stage cooling so it runs longer at lower output, which means more even temperatures and better humidity control. Higher SEER than the entry tier. Strong warranty. Smart thermostat. This is where most folks land."

Tier 3: Comfort — \$15,000

"This is the entry tier — single-stage system, base SEER for the area, standard warranty. It does what it needs to do. If the budget piece is the deciding factor, this works fine — but you give up the efficiency and the comfort features the higher tiers have."

NEED vs SHOULD framing

→ Frame the tiers as NEED (what you have to have) vs SHOULD (what you'd pick if money weren't the only factor).

"So the entry tier is what you NEED — it'll heat and cool the house. The middle and top tiers are what you SHOULD have if comfort and efficiency matter to you. Different question, different answer."

The lean + why close

This is the close on Step 4. Don't ask "which one do you want?" — ask which they LEAN toward.

"So which one do you lean to the most?"

→ **Wait. Let them answer.**

"Why is that?"

→ **Wait. They explain. Whatever they say, you confirm it back, repeat it, and agree.**

"Yeah, that totally makes sense — most folks who pick the [tier] do it for exactly that reason. Smart move."

→ **Now you've earned a tier commitment. Time for Step 5.**

STEP 5 — COMMITMENT

Qualify. Last 4 of social. Path A or Path B. Close.

The hardest part of the close isn't asking for the sale. It's the smooth transition into qualification — making the application feel inevitable, not invasive.

Step 1 of the transition — confirmation question

→ Confirm the tier commitment from Step 4 verbally.

"So just to make sure I'm tracking — you're leaning toward [tier] because [their reason]. Sound right?"

→ They confirm. Now pivot.

Step 2 — qualification pivot

→ Treat the qualification ask like a wifi password. No big deal. Don't apologize.

"Cool. Let's figure out the budget piece — I just need the last four of your social to pull a quick rate, and we'll see what monthly payment makes sense."

→ Wait. Take the last four. Run the application.

→ If they hesitate — "why do you need that?" — calmly normalize.

"Same reason any financing works — last four lets the lender pull a quick rate. Same as financing a car. Takes about 90 seconds."

The assumptive close — Path A vs Path B vs DON'T

→ Once the application comes back approved, present the close as TWO paths. Don't give them a third option.

Path A — Financed

"Okay, you're approved. So [tier] is going to run you about \$[monthly] per month over [term] years. We can either go that route — install in about 2-3 weeks — or you can pay cash if you'd rather."

Path B — Cash

"Or if cash makes more sense for you — total comes to \$[total] including install and removal of the old system. Same install timeline."

DON'T present option three ("or wait")

→ Don't ask "or do you want to think about it?" The yes/no commit from Step 2 already eliminated that option. Trust the structure.

A.A.R.C. — handling pushback at the close

→ Quick toolkit for in-the-moment pushback. Acknowledge → Agree → Reframe → Close.

Acknowledge

"Yeah, I hear you."

Agree

"That's a fair point — most people in your position think about that."

Reframe

"Here's the thing though — [reframe based on the specific objection]."

Close again

"So Path A or Path B — which feels right?"

Decline pivots — if the app doesn't approve

→ **Don't panic. Run through the pivots in order. Most deals close on a pivot.**

- **Co-signer first** — "Anyone in the family who could co-sign? Spouse, parent, adult kid?"
- **Alternate lender** — try GoodLeap if Sunlight declined, LightReach if both declined
- **Larger down payment** — "Sometimes a few thousand down changes the approval picture"
- **Tier step-down** — "At a lower tier, the loan amount might fit the approval window"

Post-signature 5-step sequence

Don't sign and run. The 15 minutes after the signature are where you cement the relationship and earn referrals.

- **1. Stay** — sit with them. Don't pack up immediately. Let the moment land.
- **2. Referral ask** — "Anyone else in your neighborhood thinking about this?"
- **3. Walk through next steps** — what happens between today and install day
- **4. Hand off to installer process** — "You'll get a call from our install coordinator within 48 hours"
- **5. Button up** — confirm contact info, confirm install window, thank them genuinely

OBJECTION HANDLING — NEPQ

When pushback runs deeper than A.A.R.C. can handle. Cross-cutting tool.

Objections aren't rejections — they're requests for information. Smoke screens aren't rejections either — they're trust gaps. Reps who fight harder lose. Reps who ask better questions win.

Filter first — objection or smoke screen?

→ Ask a clarifying question. If they engage and explain — real objection. If they shut down or repeat — smoke screen.

"When you say [their words] — how do you mean by that?"

→ Real objection → run NEPQ. Smoke screen → STOP handling. Slow down. Rebuild trust.

NEPQ — Clarify, Discuss, Diffuse

1. CLARIFY

→ Surface what's actually behind the words. Ask, then SHUT UP.

"How did you arrive at thinking that way?"

"What specifically do you want to think about?"

"Can I ask what's behind that?"

2. DISCUSS

→ Talk it through like a friend talking to a friend. NOT pitch mode. Acknowledge what's true.

→ The sin here is switching to facts and figures to prove them wrong. Don't. Stay conversational.

3. DIFFUSE

→ Ask the homeowner to envision the resolution. They commit in their own words.

"Suppose [the concern] wasn't actually what you thought it was — would that change anything?"

"If we could solve [specific concern], would there be anything else stopping you?"

The 5 objections — quick scripts

"It's too expensive" (VALUE wobbled)

"CLARIFY: How do you mean?"

"DIFFUSE: Suppose the monthly piece worked for you — would this still feel too expensive?"

"I need to think about it" (URGENCY missed)

"CLARIFY: What specifically do you want to think about?"

"DIFFUSE: If we got that piece sorted out tonight, would there be anything else stopping you?"

"I want other quotes" (VALUE gap)

"CLARIFY: Are you looking for the price, or something else?"

"DIFFUSE: What would they have to be missing for the cheaper price to make sense?"

"I need to talk to my spouse" (depends on presence)

"IF SPOUSE PRESENT: They're right here — what's the piece you want to talk about privately?"

"IF NOT PRESENT: What would you want them to know about what we discussed?"

"Come back later" (almost always smoke screen)

"CLARIFY: What would be different next time we talk?"

"DIFFUSE: If we could solve that tonight, would there be a reason to wait?"

Stop markers — when to back off

→ After ~3 NEPQ cycles with no movement OR shutdown markers (crossed arms, no eye contact, energy shift, spouse intervention), STOP.

"I can tell this isn't sitting right tonight, and that's okay. I'd rather you take the time than feel rushed. Let's set a specific time to circle back so we don't lose the thread."

The concrete follow-up

Vague follow-ups die. Concrete follow-ups hold. Three requirements: specific day/time, specific channel, confirmation text sent BEFORE you stand up.

"Are mornings or evenings better for you?"

→ **They answer.**

"Okay, let's do Tuesday at 6:30. I'll call you on this number — sound good?"

→ **They confirm.**

"Great, I'll send a quick text right now confirming so it's locked in."

→ **Send the text. Wait for them to see it on their phone. THEN stand up to leave.**

THE TRIFECTA DIAGNOSTIC

How to read what went wrong — in real-time and after the sit.

Trust. Value. Urgency. Three pillars. If a deal doesn't close, one (or more) wobbled. The diagnostic tells you which step to fix.

The three pillars

TRUST — Do they believe you?

- Built primarily in Step 1 (Product Rapport) and Step 2 (Expectations).
- Wobble signs: guarded body language, vague answers, smoke screens, refusal to verbal-commit on "is that fair?"
- Fix: slow down, build more rapport, drop energy, listen more.

VALUE — Do they see the worth?

- Built primarily in Step 4 (Value Presentation).
- Wobble signs: "too expensive," "want to shop around," tier resistance.
- Fix: re-anchor the high tier, walk through the 9 benefits more concretely, use the lean + why technique.

URGENCY — Why now and not later?

- Built primarily in Step 3 (Pain) and the honest urgency stack from HVAC 101.
- Wobble signs: "think about it," "come back next year," "it's running fine for now."
- Fix: re-run the pain points, reference rising equipment costs, refrigerant transition, repair compounding.

Real-time diagnostic

- If the homeowner pushes back at any point, ask yourself: which pillar wobbled? Which step is the fix?
- Guarded / vague → TRUST → go back to Step 1-2 fundamentals
- Price-focused → VALUE → re-present tiers, anchor high
- Time-focused → URGENCY → re-surface pain
- Smoke screens → TRUST (almost always)

FINANCING IN-CONVERSATION

Money talk without flinching. Four analogies. Three lenders.

The HVAC system is the asset. The financing IS the product. Most homeowners don't experience \$20K — they experience \$250/month.

The four analogies

1. The car — universally relatable

"You probably didn't write a check for your car, right? You financed it because spreading \$40K over a few years made it accessible. HVAC works the same way — different asset, same logic."

2. The mortgage — for asset-rich, cash-careful homeowners

"You financed the house, right? Same idea here. Big asset that pays you back in comfort and lower bills, spread over time."

3. Credit card flip — for "I don't want debt"

"If you've got a credit card balance, you're already paying 24% on stuff that's gone. This is around 8-10% on something that pays you back every month in lower bills. Way better debt."

4. Already paying it — for monthly payment hesitation

"Look at your last few utility bills — you're probably paying \$300+ a month right now for a system that's not even working right. The financing payment isn't new — it's replacement. Same money, but now it's going to comfort and savings instead of energy waste."

The three lenders — three at-bats

Sunlight — installment loan, default for strong credit

→ Lead with this for well-qualified homeowners. Homeowner owns the equipment at end of term.

GoodLeap — installment loan, backup or borderline credit

→ Try this when Sunlight declines or terms aren't competitive. Soft-pull pre-qualification available.

LightReach (Palmetto) — LEASE, safety net for non-qualifiers

→ CRITICAL: Disclose clearly that this is a LEASE, not a loan. Homeowner doesn't own the equipment. 20-25 year term. Almost always approves.

Pre-qualification line

→ Ask early. Frame as helpful, not nosy.

"Quick question — when you've financed things in the past, how's that gone? Smooth approvals, or have you run into bumps? I'm not asking for numbers, just the general shape, so I know which option to lead with."

The 5 financing objections

"I don't want a hard credit pull"

"Totally fair concern. The hit is usually 5-10 points and it bounces back within a few months. We can also start with a soft pull pre-qualification through GoodLeap — gives us a likely answer first, then only do the hard pull if we're moving forward."

"What's the APR?"

"Depends on your credit and the term you pick — usually somewhere between 8 and 12 percent. Way better than credit card debt, in line with what most folks pay on a car loan."

"I'd rather save up and pay cash"

"Totally get the instinct — but here's the thing: while you're saving, you're paying the high bills, dealing with the breakdowns, and equipment costs are going up about 8-10% a year. Financing locks in today's price and starts the savings now."

"What if I'm denied?"

"If we don't get an approval that works for you, we have backup options — three different lenders, plus a lease product that has way more flexibility on credit. We keep trying until we find the structure that works."

"I don't want to be in debt"

"Most folks already have debt — credit cards at 24%, a car loan, the mortgage. The question isn't 'debt or no debt' — it's WHAT KIND of debt. This is debt that lowers your bills every month and locks in a fixed payment against rising costs. Different category from credit card debt that funds restaurants."

FOLLOW-UP & PIPELINE

The other half of the sale. Where 30-50% of revenue lives.

The fortune is in the follow-up. Treat it as its own discipline, not an afterthought.

The 2-day rule

Follow up within 48 hours of the sit or the lead is gone. Beyond that, the pain has faded and they've normalized.

→ "Follow up" doesn't mean "check in." It means setting up another full sit — call or in-person.

When the scheduled callback gets ignored

→ Voicemail → text → CRM drip. Within ~24 hours of the missed callback, then hand off to the system.

"VOICEMAIL: Hey [name], it's [rep] from Riv Comfort — calling per our Tuesday 6:30 follow-up. Try me back when you can or I'll catch you tomorrow."

"TEXT (right after): Hey [name] — left you a quick voicemail. Whenever you have a minute, give me a call back."

→ If no response within 24 hours — drop into CRM drip. The system handles re-warming automatically. Don't escalate. Don't dial daily for a week.

"Where are you at?" — the magic question

→ Better than "have you decided?" (binary trap) or "any updates?" (vague). Use it in voicemails, texts, and live conversations.

"Hey [name], wanted to circle back on the conversation we had Tuesday. Where are you at on the decision?"

The 4-part follow-up message format

→ Generic check-ins die. Strong messages have all four parts.

- **Specificity** — reference a unique detail from the original conversation
- **Value-add** — helpful info or answer to something they asked
- **Single question** — one thing, not a list
- **Low-pressure sign-off** — "no pressure either way"

Example

"Hey [name], thinking about that humidity issue we talked about Tuesday — found that variable-speed article we discussed [LINK]. Where are you at on the decision? No pressure either way."

THE MINDSET

How veterans approach every sit.

Show up to diagnose. The sale follows.

The four mindset principles

1. You are the physical expression of the value of the equipment.

If you flinch on price, the homeowner flinches. If you carry yourself with calm authority, the homeowner trusts. The equipment doesn't sell itself. You sell the equipment by being someone whose recommendations carry weight.

2. The homeowner already has urgency. Your job is to UNCOVER it.

Manufactured urgency is manipulation. Real urgency is already there — the bills, the failures, the discomfort, the rising equipment costs. The pain step doesn't CREATE urgency. It surfaces what was already true.

3. Personal rapport gets you in the door. Product Rapport closes deals.

Likability is the floor. Trust is the ceiling. The walk-around is where likability turns into trust — through diligence, competence, and authentic curiosity.

4. The system is the asset. The financing IS the product.

The homeowner doesn't experience \$20,000. They experience \$250/month. The monthly IS the price. Lead with the monthly because that's the actual lived experience — not because it's a sales trick.

Run the Big Five. Run it again. Run it 1,000 times. The reps who internalize this and execute consistently are the ones who win.
