

RIV COMFORT HVAC DOOR PITCH

Field reference card — the door pitch at a glance, designed to read in 30 seconds before walking the street

OPEN HOMEOWNER CHECK Confirm the right person.	FRAME NEIGHBORHOOD Plant the why-now seed.	QUALIFY AGE The fork. Newer or 10+?
OPEN STRONG • Smile. Hands visible. • Quick question framing • "Are you the homeowner?" • Wait for confirmation	NEIGHBORHOOD + URGENCY • "Working on a few homes" • 10+ year systems failing • Summer heat is the trigger • Free inspection framing	THE AGE FORK • "How old is your system?" • Newer → release + card • 10+ → lock in inspection • Don't know → offer to check
CLOSE SOFT CTA Two soft options.	FALLBACK HESITATION For cold or unsure homeowners.	MINDSET PRESSURE Critical pivot once they say yes.
NOW OR LATER • "I have time right now" • "Or pop by in 30" • If neither → schedule • Standard scheduling framework	LOWER THE STAKES • "That's why we're out here" • 10-15 yr systems unnoticed • Quick age + condition check • "Sound fair?"	SHIFT THE ENERGY • Body language relaxes • Drop the sales cadence • Grab info for CRM • Then take photos / inspect

LOCKED PHRASES — KNOW THESE COLD

HOMEOWNER CHECK	"Hey! Quick question, are you the homeowner?"
NEIGHBORHOOD FRAME	"We're working on a few homes in the neighborhood. A good amount of systems out here are hitting that 10+ year range..."
THE AGE QUESTION	"Do you know how old your system is?"
NEWER — RELEASE	"Got it, you're actually in good shape then. I wouldn't mess with it. Here's my information just in case."
10+ — LOCK IN	"Yeah, that's exactly what we're seeing. Once they cross that 10-12 year mark, efficiency drops and failures spike..."
SOFT CTA	"I have some time right now, or I can pop by again here in 30 min."
FALLBACK FOR HESITATION	"That's honestly why we're out here. We're finding a lot of people sitting on 10-15 year systems without realizing it. Sound fair?"

THE FULL DOOR PITCH

Beat by beat — word tracks, directional cues, the fork, and the close.

The door pitch has one job: earn the inspection. Not the sale, not the proposal — the inspection. Every word should serve that goal.

The opening — first 5 seconds

→ Smile. Hands visible. Step back from the door slightly so you're not crowding. Tone: casual, neighborly, not transactional.

"Hey! Quick question, are you the homeowner?"

→ Wait for confirmation. If they say "no" — ask if the homeowner is around, or thank them and move on. Don't pitch a non-decision-maker.

The neighborhood frame — why you're here

→ Lead with social proof ("a few homes in the neighborhood"). Then plant the why-now seed (age + summer heat).

"Perfect. We're working on a few homes in the neighborhood. A good amount of systems out here are hitting that 10+ year range, and with the summer heat around the corner they're starting to fail pretty quick."

→ Three things this does: (1) social proof — you're not alone, (2) urgency — the seasonal trigger, (3) credibility — you're here on purpose, not random.

The offer — free inspection framing

→ "Inspection" is the right word, not "quote" or "estimate" or "consultation." Inspection sounds technical, helpful, low-stakes.

"I'm just helping homeowners get a quick inspection to see if they're at risk before it turns into a really expensive repair."

→ Don't pause for permission yet. Move directly to the qualifying question.

The age question — the fork

This is the most important question in the pitch. The answer determines everything that comes next. Ask it like you genuinely want to know — because you do.

"Do you know how old your system is?"

→ Wait. Listen. Let them answer fully. Don't fill the silence.

Branch A — system is newer (under ~10 years)

→ Don't push. Don't try to flip them. The credibility win here is bigger than a forced inspection. They'll remember you when something does happen.

"Got it, you're actually in good shape then. I wouldn't mess with it. Here's my information just in case something happens."

→ Hand over a card. Express genuine gratitude. Move on. The seed is planted — you're the rep who didn't push when they didn't need it.

Branch B — system is 10+ years old

→ **This is your homeowner. Validate their answer immediately, then build the urgency stack with specific technical detail. Compressors in heat is real, not manufactured.**

"Yeah, that's exactly what we're seeing. Once they cross that 10-12 year mark, efficiency drops and failures spike — especially compressors in this heat."

→ **Now position the inspection as helpful, not pushy. Two pieces of value: future repair cost insight + replacement viability assessment + municipality incentives.**

"What I'm doing is a free inspection. I can give you a good idea on what type of repair costs you may be looking at in the future and if it's worth replacing. I can show you what that looks like. Luckily the municipality has some great incentives to help."

Branch C — they don't know how old it is

→ **"I don't know" is a YES in disguise. They're curious. Treat it like a 10+ branch but lead with helpfulness.**

"Totally understand — most folks don't. That's actually one of the things I can check in about 30 seconds. Quick look at the unit and I can tell you the year."

The soft CTA — now or later

→ **Two-option close removes "no" as an option. They pick now, or they pick the schedule. Don't add a third option.**

"I have some time right now, or I can pop by again here in 30 min."

→ **If both options don't work for them — fall back to standard scheduling framework. Get a specific day and time. Send a confirmation text immediately.**

Fallback — when they're cold or unsure

→ **If they hesitate or seem skeptical, lower the stakes. Position yourself as helpful, not transactional. Use the social-proof return to ground it.**

"That's honestly why we're out here. We're finding a lot of people sitting on 10-15 year systems without realizing it. I can take a quick look at age and condition, and if it's even worth your time. Sound fair?"

→ **"Sound fair?" is a verbal yes/no commit — same mechanic as the in-home script. Don't move forward without active agreement.**

ONCE THEY SAY YES — RELEASE THE PRESSURE

The most underrated move in the pitch. The moment they agree to the inspection, your job changes.

This pivot is critical. The pitch you used to earn the inspection is **OVER** the second they say yes. Stay in pitch mode and you'll lose them before you even get to the unit.

What changes the moment they agree

→ Shift body language. Drop the salesy cadence. Soften your voice. You're now a contractor doing an inspection — not a rep selling a system.

→ Grab info to create the lead in the CRM **BEFORE** you take pictures or inspect. This is your rapport window.

→ Use the info-gathering as natural rapport. Ask casually, listen, build commonalities — the same 80/20 rule from the in-home walkthrough.

"Cool, let me grab a few quick details and then we'll head over to the unit. What's your full name? ... How long have you been here? ... What do you do for work?"

→ Once info is in the CRM, head to the unit. From here, you're running a modified Step 1 (Product Rapport) from the in-home script — shoulder-to-shoulder, photos, observations, casual conversation.

The handoff to the in-home script

→ If the inspection reveals replacement-grade issues, transition to the table the same way you would in a normal sit:

"Hey [Mr./Mrs. X], I have a pretty good idea of what's going on. I have a few options. Do you have anywhere we could sit?"

→ Now you're in Step 2 of the in-home script. The door pitch is complete.

COMMON MISTAKES — AVOID ALL OF THESE

1. Pitching a non-homeowner

→ If they're not the decision-maker, the entire pitch is wasted. Confirm before you spend a single sentence on the offer.

2. Skipping the neighborhood frame

→ Without social proof, you're a stranger making claims. The neighborhood frame is what makes the pitch credible — don't skip it.

3. Using the word "sales" or "quote" anywhere in the pitch

→ "Inspection" is the word. Not "free quote." Not "stop by for a sales call." The framing matters — inspection sounds technical and helpful.

4. Pushing on Branch A (newer system)

→ Trying to flip a newer-system homeowner kills your credibility in the neighborhood. Walking away gracefully on Branch A actually wins you future deals.

5. Skipping the release-pressure pivot

→ Reps who stay in pitch mode after the homeowner says yes lose the inspection at the unit. The energy shift is mandatory.

6. Adding a third option to the soft CTA

→ "Now, in 30 minutes, or do you want to schedule for later?" gives them a polite way to ghost you. Two options only.

THE MINDSET

Show up to help diagnose. The inspection follows. The sit follows. The sale follows. But none of that happens if the door pitch isn't earning the right things in the right order.

Three principles

1. The pitch isn't selling the system.

It's earning the inspection. That's it. Confusing the goal of the door pitch with the goal of the sit is the #1 reason reps overpitch and lose homeowners.

2. The neighborhood is real.

You actually are out there. There actually are 10+ year systems. Compressors actually do fail in summer heat. The pitch works because every line in it is true — deliver it like you believe it, because you should.

3. The walkaway is the asset.

Branch A homeowners (the ones you don't pitch) are future referrals and future calls when their newer system eventually fails. Treating them well is the long game. The reps who only chase Branch B leave money on the table over twelve months.

Run the pitch. Run it again. Run it 100 times today. Reps who internalize the door pitch and execute consistently are the ones who fill the pipeline.
